

Requirements Table — Problem Statement #58

Digital Art Commission & Watermarking Portal

Functional Requirements

ID	Description	Priority	Acceptance Criteria	Rationale
FR-001	The system shall allow a Digital Artist to upload a WIP illustration and shall apply a dynamic diagonal overlay watermark before the draft is displayed to the Client Buyer.	High	**Pass:** Client sees only the watermarked WIP. **Fail:** Any unwatermarked WIP is displayed.	Protects artists' work during the review stage.
FR-002	The system shall allow the Client Buyer to view a watermarked WIP and submit review feedback or approval for the current milestone.	High	**Pass:** Feedback/approval is stored against the milestone and visible to the artist.	Supports iterative commission review.
FR-003	The system shall allow the Client Buyer to initiate and complete a milestone payment through the Payment Service.	High	**Pass:** A successful payment creates a recorded payment event for the milestone. **Fail:** An unsuccessful payment is not treated as paid.	Payment gates the release of the final asset.
FR-004	The system shall unlock the final high-resolution asset only after the required milestone payment is successfully verified.	High	**Pass:** Eligible client receives a download option after verified payment. **Fail:** High-resolution asset remains inaccessible before payment.	Prevents premature exposure of paid deliverables.
FR-005	The system shall allow the Digital Artist to upload the final high-resolution source file and allow an eligible Client Buyer to download it through a time-limited secure link.	High	**Pass:** Download works for an eligible client using a valid link. **Fail:** Unauthorized or expired links cannot retrieve the asset.	Completes the commission handoff while protecting the source file.

Non-Functional Requirements

ID	Type	Description	Priority	Acceptance Criteria	Rationale
NFR-001	Performance & Security	Final high-resolution assets must generate expiring signed S3 URLs valid for 60 minutes only.	High	Benchmark/security tests confirm the target latency and that links become invalid after 60 minutes.	Limits the exposure window for high-value source files.

D	Type	Description	Priority	Acceptance Criteria	Rationale
NFR-02	Security	Access to commission data and assets shall be authorized by authenticated role and commission ownership; final assets shall not be directly publicly accessible.	High	Tests confirm a client can access only authorized commissions and that unauthenticated/public requests cannot retrieve private final assets.	Protects client, artist, payment, and intellectual-property data.
